I am applying for the Manager Cloud Transformation role as it closely matches the work I have been leading over the past years and the way I want to apply my experience going forward. My background is in driving large-scale cloud and platform transformations in complex enterprise environments, with a strong focus on business–IT alignment and delivery reliability.

At CARIAD (Volkswagen Group), I led multi-team cloud and backend consolidation initiatives across 10–12 Agile and DevOps teams, spanning platform, infrastructure, data, security, and operations. My role was to provide structure in complexity: aligning technical execution with business priorities, establishing clear governance, and ensuring predictable delivery during architectural change, including regular interaction with senior stakeholders and steering forums.

What attracts me to Deloitte is the opportunity to combine technical depth with direct client impact. I work best when cloud transformation is treated as a concrete enabler of operating model change, cost efficiency, and scalability. I am planning to relocate to Zürich and would welcome the opportunity to contribute to Deloitte's Cloud Engineering and Technology & Transformation practice.

Best regards,

Juan Cano-Selles
